

Evolution

Name:

Natural Selection Storyboards

Period:

Make colored illustrations for the examples of natural selection below. If you need to, reread p.310 of your book.

bugs are sprayed with insecticide	a few resistant bugs survive due to having special traits	the resistant bugs have babies with the same special traits	when pesticide is used again, many more bugs survive
fish around a reef have different colors	those fish with colors that stand out are eaten by predators	the fish that escape predation have babies with the same colors	when the predators come by again, fewer fish get eaten
in a warm climate, some large animals have fur, others don't	the weather gets much colder	those with fur survive the cold, many of those without fur do not	most of the large animals have fur
